

After Care of Your Keder Greenhouse 2 or 3m wide.

Keder greenhouses are designed to be very low maintenance and give years of problem free enjoyment.

However to get the very best from our product we can recommend the following:

- Wash the greenhouse as you see any build-up of dirt / algae typically once every 18 months either inside or outside, (perhaps more if it has been positioned under or near trees). A weak dilution of washing up liquid. 1part liquid to 10 parts water, using a soft scrubbing brush.
- Repaint the wood with a weatherproof wood stain any off the shelf stain will work, once every 3 – 5 years, depending on your location, costal locations may require more frequent treatment.
- Check the greenhouse wood for any signs of breakdown, once every 5 years.
- If you experience any particularly violent storms it will be worth checking all the bolts and screws are tightly fastened still.
- WD 40 / or suitable lubricant applied to any hinges, annually.
- Check all vent fixings / self tapping screws are tight on the vent, and that there is no wax on the floor by the vent (note wax on floor would indicate vent failing) annually.
